WHAT SOME MD'S SAY ABOUT COLLOIDAL SILVER:

Allan N. Spreen, MD has stated [[HTTP://STORE.YAHOO.COM/PHARMACY/DECQASES.HTML](http://store.yahoo.com/pharmacy/decqases.html)]:

"This is by far the most controversial agent in the armamentarium of 'natural' antibacterial agents. That may be because there is no known use for the silver ion in human biochemistry, which may in fact be the reason for its benefits. Dr. Jonathan V. Wright's research has found that bacteria have an enzyme system that is disrupted by the presence of silver ions, causing the organism to die. The effect is hardly a secret: water filters today are impregnated with silver to take advantage of the antibacterial effects. It was also commonly used as about the only hope against severe infections prior to the advent of antibiotics in the 1940's.

The word 'colloid' is significant, representing very tiny amounts of the substance, as very tiny particles, suspended in a liquid. This answers a common argument about colloidal silver possibly causing a known side effect of silver overuse called argyria, which can cause a graying coloration of the skin. Amounts needed for antibacterial effect tend to be far below doses that cause argyria. Dr. Wright suggests adult doses of "1 tablespoon of colloidal silver at a 40 ppm (parts per million) concentration at the first signs of any infection and 1-2 teaspoons three to four times daily until the infection is gone. Then stop!" [NOTE: SOLACE IS 200+ PPM & THE RECOMMENDED DOSE IS ½ TSP 3X A DAY.]

We'll probably never see such low-profit ideas reach the level of accepted conventional medical therapy. However, it might be worth everyone's while to get more informed...in case the day actually arrives that the conventional armamentarium runs dry."

And from Archives of Internal Medicine Sept. 25, 2000:
Silver Catheters Prevent Urinary Tract Infections.

Silver-coated urinary catheters may prevent urinary tract infections (UTI) better than uncoated catheters. In addition, although they are more expensive, their use is likely to mean lower costs overall, according to a new study.

- The use of silver-coated catheters resulted in a **47% decrease in the incidence of UTI.**
- Use of silver alloy catheters resulted in estimated cost savings of over \$4 per patient compared with standard catheter use.

"The potential cost savings from this sort of research are tremendous because an episode of UTI increases length of stay so much," says David Nash, MD, MBA, to WebMD. "What's particularly good in this paper is the way they selected patients at highest risk as candidates for silver alloy catheters." Dr. Nash is associate dean of Jefferson Medical College in Philadelphia and director of its office of health policy.

DYNAMITE® Solace is a colloidal silver preparation containing a minimum of **200 ppm** of colloidal silver plus **4000 ppm of other colloidal minerals** which dramatically increases its stability and electrical potential.

Currently, the FDA does not allow colloidal silver manufacturers to state uses of silver even though it has been used as a powerful, natural prophylactic and antibiotic for thousands of years with no known side effects, and in spite of the fact that silver is used in numerous medications including burn ointments and, as the article indicates, as a coating for various catheter tubes.

Rather than attacking a *pathogen*, colloidal silver acts as a *catalyst*, disabling the particular *enzyme* that all one-celled bacteria, fungus and virus use for their oxygen metabolism. Because of this action, it is known to kill over 850 forms of bacteria, virus, germs and fungi within 6 minutes, or less, upon contact, working both on and in the body and in food without developing resistant bacterial or viral strains. It also has been shown to help support the immune system, rapidly subdue inflammation, soothe and promote healing of various lesions, and, diluted properly, has been used successfully in septic conditions of the mouth, throat, ear & eye. We and many others have used it in a multitude of ways:

- numerous individuals have found it effective as a nasal spray/snuff for sinus situations, as a throat gargle for sore throats, as an eye wash for conjunctivitis, dry eye, various injuries, and styes & as an ear drop for infected ears, etc.
- in cases of equine *uveitis* (moon blindness) & canine tear duct infections drop undiluted directly into eye
- we have found it very handy to keep on hand empty **Release, Relax & Tranquil** bottles (or any small spray bottle) into which we pour the **Solace** for spray application into eyes or onto large, open wounds including all burns: the negative ion of silver counteracts the positive charge of burn damaged tissue and can accelerate healing astronomically by spraying liberally and frequently and also taking it internally
- animals afraid of the spraying sound relax quite a bit if the person makes a "chssshhh" sound repeatedly before and during spraying—in fact, it will become associated with lessened discomfort and the animal will respond favorably in tense situations even if the spray is not used
- a bulb syringe from the drug store can also be used as an applicator for eye, ear or nasal use or for flushing
- "snuffling" up the **Solace** into nostrils, or the gentle use of a bulb syringe or *neti* pot, helps relieve sinus congestion; a lot of mucus can be expelled so be sure to have plenty of tissues handy
- we have observed no contra-indications for combining antibiotics and **Solace**, although *pro-biotics* (**DynaPro!**) should always be taken along with *anti-biotics*
- be sure to follow the directions for dilution, if needed; the distilled water is necessary to carry the **Solace** into cellular structures
- we prefer to use **Solace** as a navel treatment for new-born foals rather than harsh & drying iodine solutions
- those requiring antibiotics before dental work have used **Solace** for 3-4 days before & 10 after in lieu of them
- one **DYNAMITE®** rep tells about eating a spoiled pastry and getting very nauseous within about an hour and a half; she instinctively grabbed for some **Solace** and took 3 swigs over about 20 minutes with the results of no more nausea
- a **DYNAMITE®** Director has worked with her local Humane Society in dealing very successfully with **Parvo** outbreaks by using the following formula per 30# dog: 1 cc **Solace** combined with 3cc distilled water given by mouth 1x per hr for 6 hours each day for 3 days; then giving 10 cc **Solace** per qt. distilled water in a glass/plastic water bowl for 3 weeks—this would probably be effective for a wide variety of similar virus situations [ANALOGOUS DOSAGES FOR EQUINES & HUMANS WOULD BE, IN ORDER: 10-12 CC (30CC = 1 OZ) & ½ TSP]

YET ANOTHER OF THE absolutely "can't live without" **DYNAMITE®** products! ■
