Another item that has a starring role in our First Aid Kit and one which we never want to be without! Not meant to be taken daily as a mineral supplement, it is designed to be used only when needed for specific purposes and for a limited time. Among the innumerable ways it has been used are:

- stops bleeding both outside such as razor nicks (it can sting here!) & inside (taken according to directions) such as bleeding ulcers or race horses with lung bleeding
- stool will become black if bleeding internally somewhere along intestines (or with dysentery)—continue internal use until color returns to normal
- if it burns on contact, that could mean an acidic pH condition in the body
- applied full strength on cold sores, it stops them in their tracks; may require a few applications
- we have used it on a cotton swab (soaked in it) and daubed on a never-ending nosebleed—stopped almost immediately with absolutely no discomfort whatsoever since it was high above the nerve endings
- one drop in dog ears (when dog shakes its head and paws at his ears) daily or weekly depending on need— seems to alleviate symptoms within minutes
- race horses with performance-induced lung bleeding can be helped really quickly by taking a dropper-full per day
- just a couple of drops per day taken internally with mild anemia can seem to increase energy tremendously
- stops itching from mosquito bites, etc. immediately although it may need multiple applications
- we've seen this act as a great temporary blood builder: frequently horses under stress can take 10-20 drops in their feed for 3 days or so when severely stressed and humans in stressful conditions can take 5-10 drops—it has helped one friend with cancer survive both radiation and chemo without all the dreadful side-effects, especially no fatigue!
- others have indicated you should take **Trace Mineral Concentrate** anytime you have dysentery or bleeding in the stool starting with 20 drops per day
- one holistic vet uses the **Trace Mineral Concentrate** drops while doing surgery to minimize/stop the bleeding; has been doing this for several years now and he also recommends taking the drops for several days before surgery as well as after
- ...and a chiropractor says "On petri dish tests, **Trace Minerals** is 40x more effective than penicillin. I have had it pull thru on so many different types of things, I could write a book on it."
- **WARNING: DO NOT USE IN EYES!** Also be careful of this around clothes as it can permanently stain

A report taken from a **DYNAMITE®** newsletter:
"I wouldn't have believed it if I didn't see it with my own eyes!!! Tonight I went outside to move my yard sprinkler. My sprinkler has a spike on it that you pound into the ground. There was a big rock where I wanted to put it so I grabbed a knife and tried to dig the rock up. The knife slipped and flung into the air striking me in the chin. I had blood gushing every-

where. By the time I got in the house and to the bathroom I literally had both of my hands full of blood.

*I washed off my chin and saw that the cut was at least a quarter of an inch deep and about an inch and a half long. My first thought was 'Crap, I don't have time to get stitches!' Then I remembered what Regan said at the **DYNAMITE®** seminar about **Trace Minerals** stopping bleeding. I grabbed my **Trace Minerals** and started dropping it onto the cut. The bleeding stopped in about 3 seconds. It instantly started scabbing. The scab was so strong that it held both sides of the cut together. I put some **Trace Minerals** onto a band aid, stuck it on my chin, and went back outside to finish my chores. I just came in the house and the cut did not even bleed through the bandaid. No stitches for me! **Trace Minerals** are a GREAT product!!!!!!" Melissa, AZ*

...and these from RI Director, Jennifer Judkins, M.D.:

#1: *"In the office, I use the **Trace Minerals** for nosebleeds. I have never in 10 years of ENT [Ear, Nose & Throat] practice seen anything more effective at stopping bleeding [than the **TMC**]. It instantly seals the bleeding vessel. I usually apply it topically full strength using a cotton swab. I have also sprayed it diluted in distilled water using an atomizer. Every patient in the Sinus study gets a spray of it whenever they're in the office. They love the stuff. Sense of smell returns within hours.*

*Patients tolerate it directly applied with just minor burning. It is wonderful stuff. In fact I used it twice today (01/24/03) in the office. Used to be patients would come in two or three times to get their noses cauterized before their nosebleeds would stop. I don't think I have had a single patient require a second application since I've started using the **Trace Minerals**. I even used it recently in a cancer patient with very low platelets (typically a very difficult nosebleed to stop). It worked instantly and bleeding never reoccurred.*

I keep it handy at work, home and on the trail. Wouldn't go anywhere without it. Try it, you'll like it!"
#2: *"Last night I was on call for our group. At 2:30 am I was called about a nearly 3 year old with profuse bleeding after having his tonsils and adenoids out earlier in the day. I rushed over to the hospital to evaluate the child. He was bleeding from the nose and mouth, vomiting large clots. Typically this would be a scenario requiring anesthesia and a return to the operating room to control. I asked the parents if they would mind me trying something new to control the bleeding...if it worked great...if it didn't we would proceed to the OR. Well, I sprayed his nose and throat with the **Trace Minerals** and in a few seconds the bleeding stopped. I waited 30 or 40 minutes, still dry as a bone and sleeping like an angel. Its been 15 hours now and there has been no further bleeding. I am perplexed and awestruck by the properties this substance displays."*

#3: *Another time, Dr. Judkins reported using **TMC** successfully with a horse who had a severe hemorrhage following an extraction; she said within moments the hemorrhage stopped and 3 hrs later had not started up again.*

THERE ARE PROBABLY hundreds more ways to use it and maybe eventually we will find them all! ■
